YOUR TOYOTA SERVICE CENTRE KNOWS THE BEST TYRES FOR YOUR TOYOTA.

Your Toyota knows that nobody is better qualified to recommend the right tyre for your Toyota than fully trained Toyota Service Advisors. They know the brands which deliver maximum performance & safety, including original equipment tyres.

You'll find our tyres competitively priced with the added convenience of being able to be fitted while your car is being serviced. Better still, we also provide full wheel balancing and alignment facilities. You see, your Toyota Service Centre does a lot more than just servicing, and we do it all genuinely better.

GETTING THE BEST OUT OF YOUR TYRES

- **Check Your Tyres' pressure regularly in between services.** Toyota recommends every two weeks or at least once per month and don't forget the spare. Incorrect tyre pressure affects tyre grip, ride comfort, fuel consumption and overall tyre performance. Tyre pressures should be checked with an accurate tyre gauge when the tyres are cold which means before the car is driven. Refer to your Owner's Manual or your vehicle's tyre placard for the correct tyre pressure. Regularly check the tyres' tread depth and look for any signs of unusual tyre wear.

- **Why Balance and Align the Wheels?** Having us correctly balance and align your wheels will ensure a smooth ride with no vibrations. It will also aid in responsive steering and help you gain maximum mileage from your tyres. Kerb or large pothole impacts can damage tyres and alter wheel alignment, these settings should be checked as soon as possible after such contact.
- **Wheel replacement and selection.** If you need to replace a wheel because of damage or for cosmetic purposes we'll ensure they are replaced with wheels offering the same load capacity, diameter, rim width and offset.

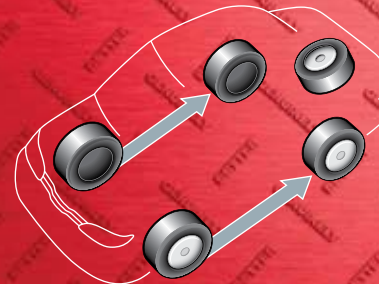

This is highly important as a wheel of a different size may adversely affect handling, wheel bearing life, brake cooling, headlight aim and the calibration of your speedometer. Your Toyota Service Centre can show you a comprehensive range of alloy wheels specifically designed for your Toyota.

- **Alloy Wheels.** If you install alloy wheels or have them rotated, recheck the tightness of the wheel nuts after the next 1,600km of driving. In order to avoid damaging alloy wheels only ever use the Toyota wheel nuts and wrench designed for your specific wheels.

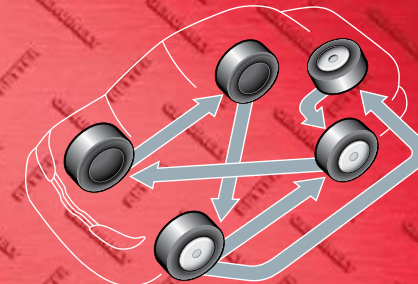

ROTATING TYRES

To equalise tyre wear and extend tyre life you should rotate your tyres every 5,000km or even more frequently depending upon your driving habits and road conditions.

Your Toyota Service Centre will be able to advise you if you have any questions regarding the Tyre Warranty. Tyres are covered by the tyre manufacturer's warranty.

NB: Directional tread tyres should be rotated from the front to the rear of the vehicle.

NB: Assuming the use of the spare tyre
